isomerases or ligases. The sequences of the invention are useful in the diagnosis, treatment, prevention and/or prognosis of a wide range of diagnosis, treatment, prevention and/or prognosis of a wide range of disorders including hyperproliferative disorders (e.g. cancer), immunodeficiency disorders (e.g. ALDS) autoimmune disorders (e.g. cancer), ce.g. arthritis), neurological disorders (e.g. Alzheimer's disease), metabolic disorders (e.g. phenylketonuria), inflammatory disorders (e.g. asthma), cardiovascular disorders (e.g. atherosclerosis), blood-related disorders (e.g. damapphilla), reproductive disorders (e.g. infertility) and infectious disorders (e.g. Influenza). The polynucleotides of the invention can also be used in gene therapy.

AAS40785-AAS41684 represent cDNA sequences encoding for the novel human enzyme polypeptides of the invention.

Canzyme polypeptides of the invention can also be used in gene therapy in the sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at the printed specification is the printed of the printed specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    17-NOV-2000

The invention relates to isolated nucleic acid molecules and their CC encoded secreted proteins. The nucleic acids and proteins are used to prevent, treat or ameliorate a medical condition in e.g. humans, mice, CC prevent, treat or ameliorate a medical condition in e.g. humans, mice, CC arabits, goats, horses, cats, dogs, chickens or sheep. They can also used in diagnosing a pathological condition or susceptibility CC to a pathological condition. Antibodies to the proteins can also CC immunoscial individual condition associated with the disorders and in CC diagnostic immunoassays e.g. radioimmunoassays or enzyme linked CC include autoimmune diseases e.g. rheumatoid arrhitits, CC hyperproliferative disorders e.g. neoplasms of the breast or liver, CC e.g. cerebral ischaemia, angiogenesis, nervous system disorders e.g. CAlzheimer's disease, infections caused by bacteria, viruses and fungicand cular disorders e.g. corneal infection, and many other CC disorders listed in the specification. The polypeptides can also be used to aid wound healing and epithelial cell proliferation, to prevent skin aging due to sunburn, to maintain organs before
regenerate tissues and in chemotaxis. The polypeptides can also be used as a food additive or preservative to increase or decrease storage capabilities, fat content, lipid, protein, carbohydrate, vitamins, minerals, cofactors and other nutritional components. The present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    17-NOV-2000

                                                      This is the nucleotide sequence of cDNA clone DNA43318 (ATCC 209481) cooling for human PRO343 (UNQ302) (see AAY06482). The clone was isolated from a foetal lung library. Amplification of DNA43318 (chromosome 16) was observed in primary lung and primary colon tumours, suggesting an association with tumour formation or growth. Antagonists (e.g. antibodies) directed against PRO343 may have utility in cancer therapy. The invention identifies 14 genes (see AAX87624-67) that are amplified in the genome of tumour cells. Such amplification is expected to be associated with overexpression of the gene product and to contribute to tumorigenesis. The encoded to gene hav06477-90) may be useful targets for the diagnosis and/or treatment (including prevention) of certain cancers, and may calculate the second contribute to tumorigenesis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        977 C 977

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 03-NOV-1
07-NOV-1
                                                                                                                                                                                                                                                                                                                                                                                                                       Zollinger-Ellison syndrome, gastrointestinal ulceration and congenital microvillus atrophy), skin diseases associated with abnormal keratinocyte differentiation (e.g. psoriasis, epithelial cancers such as lung squamous cell carcinoma of the vulva and gliomas), potent effects on cell growth and development, diseases related to growth or survival of nerve cells including Parkinson's disease Alzheimer's disease, ALS, neuropathies or cancer. PROZ65 can be used as for fibromodulin, e.g. for reducing dermal scarring. PROZ64 can be used as a target for anti-tumor drugs. PROZ63 may be used in the treatment of Usher Syndrome or Atrophia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     AAX52213-74 encode secreted and transmembrane human proteins, and are obtained from cDNA libraries, prepared from fetal lung, fetal kidney, fetal brain, fetal liver and fetal retina. The encoded polypeptides have specific uses based on their homology to known polypeptides, e.g. PRO211 and PRO217 can be used for disorders associated with the preservation and maintenance of gastrointestinal mucosa and the repair of acute and chronic mucosal lesions (e.g. entercolitis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               21-NOV-1997;

                                                                                                                                                                                                                                                                                                                                   The present sequence encodes a novel human polypeptide. The specification describes novel polypeptides designated PRO201, PRO292, PRO327, PRO1265, PRO344, PRO347, PRO357, PRO357, PRO715, PRO1017, PRO1112, PRO509, PRO853 and PRO882. These genes are amplified in the genome of tumour cells. The polypeptides are believed to contribute to tumourigenesis. The polypeptides are useful target for the prognosis of tumour treatment. Antibodies against these polypeptides are useful in the treatment and diagnosis of neoplastic cell growth and profiferation in memmals.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      01-SEP-1999;

```
The present sequence is one of sixty one nucleic acids encoding novel secreted and transmembrane PRO polypeptides. The PRO polypeptides are useful for treating skin diseases (e.g. psoriasis), cancers (e.g. lung squamous cell carcinoma), gastrointestinal disorders (e.g.

Protease C-E gene is located on chromosome 16p13. and is expressed in pancreas, placenta, prostate, small intestine, stomach, spleen, fibroblasts, epidermis, cerebellum, cerebral cortex, pituitary and hippocampus. Protease C-E is useful for treating an imbalance of desquamation, by topical application. A non-pharmaceutical composition comprising the protein may be formulated as a laundry detergent, shampoo, hard surface cleaning composition, dish care cleaning composition, skin care composition and hair care composition. Protease C-E is useful for treating and preventing skin flaking, neurodegenerative disorders and dermatological pathologies. It is less immunogenic to sensitive individuals and it provides efficient protection with the protection of the protection o

diagnose diseases or disorders associated with aberrant expression activity of polypeptides, for treating blood clotting disorder, haemophilia Novel polypeptides and polynucleotides useful as diagnostic reagents or ç

encoded secreted proteins. The nucleic acids and proteins are used to prevent, treat or amelicrate a medical condition in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. They are also used in diagnosing a pathological condition or susceptibility 6 The invention relates to isolated nucleic acid molecules and their þ pathological condition. Antibodies ç the proteins

alignment_block: US-10-040-803-7 x AAS26871 alignment_scores: Align seg 1/1 to: AAS26871 Percent Similarity: Alzheimer's disease, infections caused by bacteria, viruses and fungiand ocular disorders e.g. corneal infection, and many other disorders listed in the specification. The polypeptides can also be used to aid wound healing and epithelial cell proliferation, to prevent skin aging due to sunburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues and in chemotaxis. The polypeptides can also be use as a food additive or preservative to increase or decrease storage as a food additive or preservative to increase or decrease storage be used in alleviating symptoms associated with the disorders and in diagnostic immunoassays e.g. radioimmunoassays or enzyme linked immunosorbant assays (ELISA). Disorders which are diagnosed or treated include autoimmune diseases e.g. rheumatoid arthritis, hyperproliferative disorders e.g. neoplasms of the breast or liver, cardiovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cerebral ischaemia, angiogenesis, nervous system disorders e.g. 134 454 117 404 304 minerals, cofactors and other 504 354 154 101 254 204 104 ATGGTGGTTTCTGGAGCGCCCCCAGCCCTGGGTGGGGGGCTGTCTCGGCAC 84 67 51 34 17 rpLysGluGlyAlaCysAlaAspIleAlaLeuValArgLeuGluArgSer MetValValSerGlyAlaProProAlaLeuGlyGlyGlyCysLeuGlyTh lnAspGlyValProLeuProHisProGlnThrLeuGlnLysLeuLysVal IleGlnPheSerGluArgValLeuProIleCysLeuProAspAlaSerIl GGAAGGAAGGTGCCTGTGCAGACATTGCCCTGGTGCGTCTCGAGCGCTCC 9SerG1nLysValG1yValAlaTrpValG1uProHisProValTyrSerT LeuPheSerValLeuLeuGlyAlaTrpGlnLeuGlyAsnProGlySerAr GGGTGATCACTGCTGCCCACTGTTTCAAGGACAACCTGAACAAACCATAC rpValI1eThrAlaAlaHisCysPheLysAspAsnLeuAsnLysProTyr ValGlyGluAspSerThrAspSerGluTrpProTrpIleValSerIl GGATACCTGTTCCCCCAGCCTGTGGGAAGCCCCAGCAGCTGAACCGGGTT rgIleProValProProAlaCysGlyLysProGlnGlnLeuAsnArgVal CTTCACCTCCCTGCTGCTGGCGTCGACAGCCATCCTCAATGCGGCCA rPheThrSerLeuLeuLeuAlaSerThrAlaIleLeuAsnAlaAlaA eHisLeuProProAsnThrHisCysTrpIleSerGlyTrpGlySerIleG GTCCCAGAAGGTGGGTGTTGCCTGGGTGGAGCCCCACCCTGTGTATTCCT CTGTTCTCTGTGCTGGGGGGGCCCTGGCAGCTGGGGAACCCTGGCTCTCG GTGGGCGGCGAGGACAGCACTGACAGCGAGTGGCCCTGGATCGTGAGCAT CCACCTCCCTCCAAACACCCACTGCTGGATCTCAGGCTGGGGGAGCATCC ATACAGTTCTCAGAGCGGGTCCTGCCCATCTGCCTACCTGATGCCTCTAT Quality: Ratio: 5.426 100.000 1720. from: 1 Gaps: 0

DX DX PX

(e.g. infertility) and infectious disorders (e.g. Influenza). The polynucleotides of the invention can also be used in gene therapy. AAS40785-AAS41684 represent cDNA sequences encoding for the novel human enzyme polypeptides of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO

at ftp.wipo.int/pub/published_pct_sequences.

immunodeficiency disorders (e.g. AIDS) autoimmune disorders (e.g. arthritis), neurological disorders (e.g. AIZheimer's disease), metabolic disorders (e.g. phenylketonuria), inflammatory disorders (e.g. asthma), cardiovascular disorders (e.g. atherosclerosis), blood-related disorders (e.g. haemophilia), reproductive disorders (e.g. atherosclerosis)

```
The present invention relates to the isolation of novel human enzyme polypeptides (AAU22915-AAU23814), and the CDNA and genomic sequences encoding them. The enzyme polypeptides of the invention may comprise the functional classes of oxidoreductases, transferases, hydrolases, lyases, isomerases or ligases. The sequences of the invention are useful in the diagnosis, treatment, prevention and/or prognosis of a wide range of
                                                                                                                                                                                                                                                                                                                                                  08-DEC-2000;

Novel polypeptides and polynucleotides useful as diagnostic reagents diagnose diseases or disorders associated with aberrant expression or activity of polypeptides, for treating blood clotting disorder, to

Claim 1; SEQ ID No 135; 601pp; English.

encoded secreted proteins. The nucleic acids and proteins are used to prevent, treat or ameliorate a medical condition in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. They are also used in diagnosing a pathological condition or susceptibility The invention relates to isolated nucleic acid molecules and their pathological condition. Antibodies to the proteins can also

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CC be used in alleviating symptoms associated with the disorders and in CC diagnostic immunoassays e.g. radioimmunoassays or enzyme linked CC immunosorbant assays (ELISA). Disorders which are diagnosed or treated CC include autoimmune diseases e.g. rheumatoid arthritis, CC cardiovascular disorders e.g. neoplasms of the breast or liver, CC cardiovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. CC Alzheimer's disease, infections caused by bacteria, viruses and fungi CC and ocular disorders e.g. corneal infection, and many other CC disorders listed in the specification. The polypeptides can also be used to aid wound healing and epithelial cell proliferation, to CC prevent skin aging due to sumburn, to maintain organs before CC transplantation, for supporting cell culture of primary tissues, to CC regenerate tissues and in chemotaxis. The polypeptides can also be used CC as a food additive or preservative to increase or decrease storage CC capabilities, fat content, lipid, protein, carbohydrate, vitamins, minorease, and other content, lipid, protein, carbohydrate, vitamins,
